Notes to glossary

1. The reflexes of this etymon in NT dialects point to PT *-r. It is generally thought to be the same etymon as 'hair knot' found only in CT and SWT with *-l-. The Siamese form generally refers to 'hair knot' but means 'head' in the expression /puət^{DL1} siən^{A1} wiən^{A2} kla:w^{C1}/ 'to have a headache, to be confused'. See 'hair knot'.
2. cf. 頭 *tóu* 'head' (Sagart 1999) from MC *dəu*, LH *do*, and OC *dô. This etymon is not found in NT, and might in fact be a post-PT loanword.
5. Reflexes in some dialects, e.g. Ningming /hon^{A1}/, point to an immediate stage *χ-. See 'leg'.
6. The Siamese form means 'nose bridle'.
11. cf. PAN *matá 'eye'.
14. The Cao Bang form is found only in compounds, e.g. /kʰi:^{C1} van^{A2}/ 'food stuck between teeth'.
15. cf. 顎 *è* 'palate' (Schuessler 2007: 224) from MC *ŋāk*, LH *ŋak*, and OC *ŋāk.
16. NT varieties point to earlier *ml-. The cluster is probably due to influence of the final *-m in PT *Ç.nam^C 'water', with which the etymon 'saliva' usually occurs, cf. Saek /nam^{C2} mla:j^{A2}/ 'saliva'.
18. The initial *k.- may have been a prefix that was lost early on in dialects that have reflexes with tone A2.
19. This etymon independently came to be the general word for 'tooth' in most dialects, e.g. Lao, White Tai, Lungchow, Cao Bang, etc. Siamese still preserves the original meaning. See 'tooth'.
20. Shangsi shows /kʰ-/ instead of the expected /h-/.
22. cf. 喉 *hóu* 'throat' (MC *ɣəu*; LH *go*; OC *gô).
24. cf. PAN *qabáya 'shoulder'.
25. cf. 肩 *jiān* 'shoulder' (MC *kien*; LH *ken*; OC *kên).
27. The /-ŋ/ in Yay and other NT languages resulted from a sporadic nasalization, i.e. *mwu:^A > *mwũ:^A > *mwu:ŋ^A.
28. Not found in NT.
29. The long vowel in Saek seems irregular but the Lakkja cognate /pli:p^{DL1}/ also has a long vowel.

30. The Yay form means 'a piece or section of a tree cut' and might not be related.
31. Some dialects including Wuming, Yongbei, Shangsi, and Ningming point to an immediate stage *χ-.
32. Saek /k-/ is aberrant. It might be a result of contamination from 'leg'.
33. cf. 脛 *jìng* 'shin' (MC *ȳieŋ*^C; LH *geŋ*^C; OC *gêŋh). Lungming unexpectedly has /k-/.
38. cf. 腰 *yāo* 'waist' (MC *ʔijäw*, LH *ʔiau*, OC *ʔiaw*).
39. PT *C.wuət^D > *hwuət^D.
41. Sapa /du^{A1}/ is found in /du^{A1} maj^{C2}/ 'wood knuckle' only. See 'gall bladder, bile'.
49. cf. 尿 *niào* 'urine' (Schuessler 2007: 401) from MC *nieu*^C, LH *neu*^C, and OC *niâu(k)h. Independently in SWT and NT dialects, *n- became palatalized in front of *-i-, yeilding *ɲiəw. NT further simplify the intermediate form to due *ɲɿw, i.e. *niəw > *ɲiəw > *ɲɿw. CT /new/, /ne:w/ and /nɛ:w/ most likely resulted from simplification of *iəw to *e:w, cf. 'single, one', but it is also possible that they are late Chinese loans, cf. Mandarin niao.
53. In many dialects including Shan, Yay, Saek, etc., this etymon means 'brain'. In other dialects, it also refers to 'bone marrow', cf. Bao Yen /ʔɔ:k^{DL1} du:k^{DL1}/ 'brain'. See 'brain'.
54. The onset reflexes in Yay and other NT dialects show sporadic nasalization under the influence of *-n.
57. Contrast PT *n.m- > *mn- > *ml- in NT with PT *n.m- > *nu- in SWT and CT.
59. Cao Bang shows PT *r.t- > *tr- > /th-^{B1}/ but Shangsi indicates *r.t- > *d- > /t-^{B2}/. Standard Siamese now shows an irregular /ɲ-/, possibly due to spontaneous nasalization.
60. cf. 膿 *nóng* 'pus' (MC *nuoŋ*; LH *nouŋ*; OC *nũŋ).
63. The /-l-/ in Siamese /khlaɲ^{A2}/ is unexpected. CT forms /laɲ^{A2}/ or /jaɲ^{A2}/ are not related to this etymon.
64. In many dialects including White Tai, Black Tai, Lue, Leiping, etc., this etymon means 'brain'. In other dialects, it occurs in a compound with *ʔwu:k^D 'bone marrow', cf. Bao Yen /ʔɔ:k^{DL1} ʔɛ:k^{DL1}/ 'brain'. See 'bone marrow'.
66. cf. 肺 *fēi* 'lung' (MC *p^hjwɛi*^C, LH *p^huas*, OC *phats).
67. Lakkja /kja:j^{C1}/ 'intestine' suggests PT *k.saj^C, but Tai-internal evidence is lacking.

70. Cao Bang /d-/ might have been due to contamination from 'navel (2)'. The confusion between 'navel' and 'gall bladder, bile' is common among Tai dialects, cf. Sapa /saj^{C1} bi^{A1}/ 'navel, umbilical cord' from PT *saj^C 'intestine' + *bli^A 'gall bladder, bile'.
73. The irregular tonal reflexes might be related to the taboo nature of this etymon.
75. It is conceivable that this etymon was in fact *q.ma:^A, cf. Lakkja /k^hwõ^{A1}/, but Tai evidence is lacking.
76. It is possible to reconstruct *q.mu:^A, for this etymon, cf. Lakkja /k^hũ^{A1}/, but Tai-internal evidence is lacking.
79. cf. 馬 *mǎ* 'horse' (MC *ma*^B; LH *ma*^B; OC *mrâ?).
80. cf. PAN *tumáy 'bear'.
82. This etymon is reconstructible at the PT, though ultimately from 象 xiàng 'elephant' (MC *zjaŋ*^B; LH *ziaŋ*^B; OC *s-jaŋ?). Wuming /ɕiəŋ^{C2}/, Yongbei /tsu:ŋ^{C2}/, Lianshan /θe:ŋ^{C2}/ among others are later Mandarin loan from the same Chinese etymon.
83. PT *kwuəŋ^A > *wuəŋ^A > /vuəŋ^{A2}/ in Yay and Saek.
87. The Saek form /pa:ŋ^{B1}/ is unrelated.
90. PT *h_ɲ- became *h- in front of front vowels in all SWT and some CT dialects.
92. Thai form /nim^{B2}/ is not related
93. See 'tree, wood'.

716. See 'Is pronoun (strong)'.
717. PT had both *ku:^A and *kaw^A. See Strecker (1984) for discussion. The distribution of the two may have been prosodically conditioned, i.e. *kaw^A occurred in prosodically prominent positions, while *ku:^A occurred in prosodically weak positions.
718. See Strecker (1984) for discussion. This etymon probably occurred in prosodically prominent position, cf. the reduced form *mau^A.
720. See Strecker (1984) for discussion. This etymon probably occurred in prosodically prominent position, cf. the strong form *mun^A.
722. The Saek reflex /o:/ may have resulted from a reduction of earlier *-aw.
723. This form might not be reconstructible at the PT level.
724. cf. 雙 *shuāng* 'pair' (MC *ṣaŋ*; LH *ṣoŋ*; OC *srōŋ).

725. cf. 三 *sām* ‘three’ (MC *sâm*; LH *sam/ səm*; OC **sâm*).
726. cf. 四 *sì* ‘four’ (MC *si*^C; LH *sis*; OC **sis/ slis*).

732. cf. 幾 *jǐ* ‘how many’ (MC *kjei*^B; LH *kɪi*^B; OC **kəj?*). The tonal reflex is rather irregular because this is a grammatical item.
736. The vowel reflexes are not completely regular because this etymon is a grammatical word.
737. cf. 多 *duō* ‘many’ (Schuessler 2009) from MC *tā*, LH *ta* < *tai*, and OC **tâi* < *tlai*.
738. See 'small'.

771. This cannot go back to *C.n- because Saek has /l-/ rather than /n-/.
774. SWT and some CT dialects show reflexes *i:. This is probably because this etymon is a grammatical word. It is also possible that two forms *naj^C and *ni:^C co-existed. See *kaw^A and *ku:^A both '1s pronoun'.
775. Some languages unexpectedly have /ɾ/, e.g. Sapa.
780. Many dialects such as Lao, Yuan, Western Nung have /bo:^{B1}/ rather than /baw^{B1}/. These monophthongal reflexes are reduced forms developed independently in individual varieties. Lungchow and Yay have both the full and reduced forms. See 'not (strong 2)'.

782. The tonal irregularity is not surprising because this etymon is a grammatical item.
